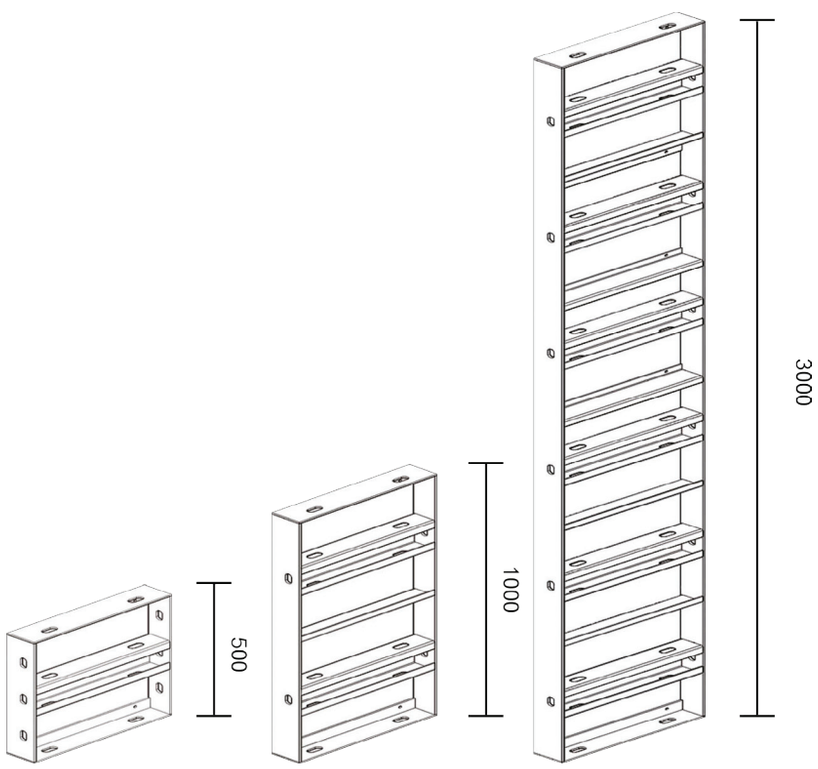
ACROW Formwork Technology

## Introduction

Being one of the largest formwork and scaffolding companies, we are introducing the V.M.C system for column formwork. It is a Man Handling Column system which has proved to be suitable when there are no available cranes.
In addition, the column cross-section flexibility (in 5 cm increment) makes it easier for re-adjustment without the need for reassembly. Regarding the safety, the system has been equipped with a concrete platform to ensure its safety, flexibility and economic advantage.

## Column Height

**Height increments of 50 cm:**
There are three different elements heights (3.00 m, 1.00 m, 0.50 m) to ensure optimal concreting heights adjustment.



**Column Cross-Sections:**
There are different cross-section combinations allowing for rectangular or square configurations. The cross-sections varies from (40 cm * 40 cm) up to (80 cm * 80 cm) with 5 cm increments.

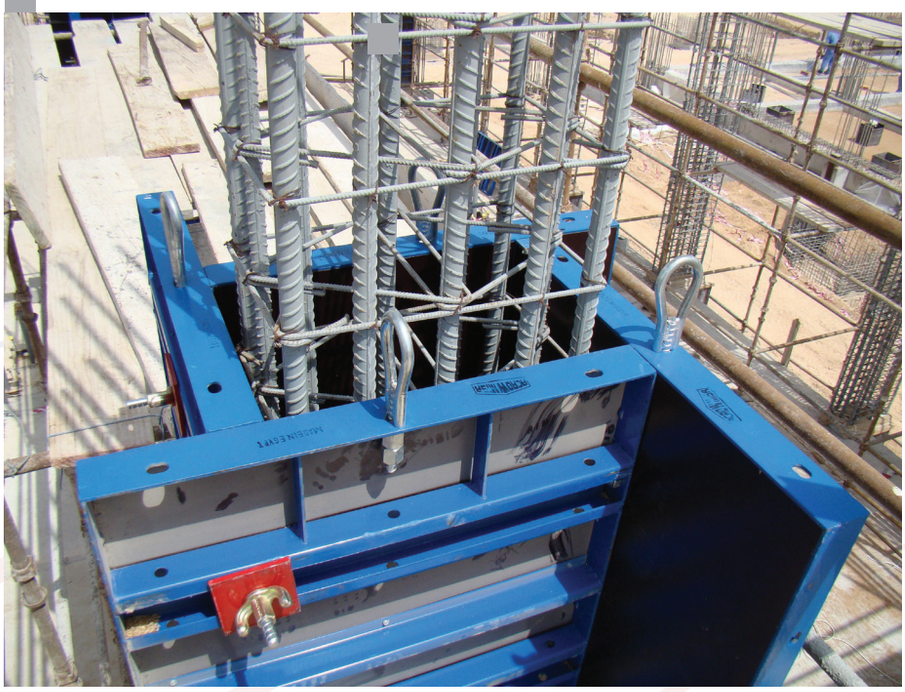
## Accessories

- Captive column Tie Bolts and wing nuts are permanently attached to each element.

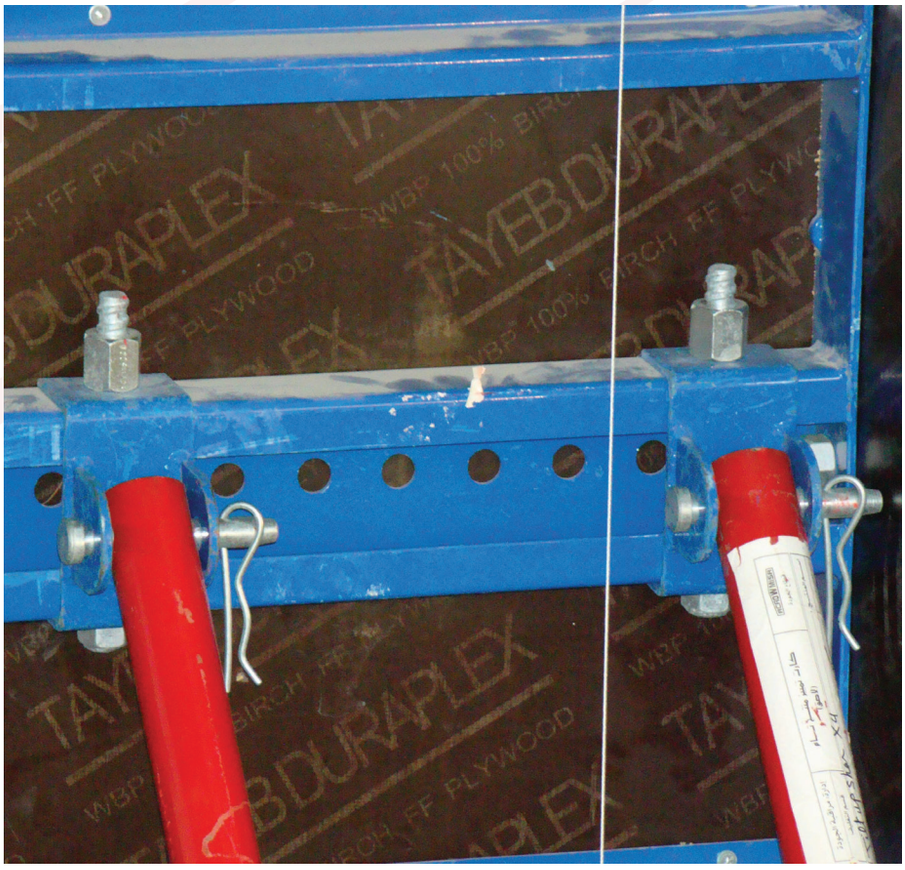
- Lifting Hooks act as load bearing points for moving and ensures easy and simple extensions.

- Acrow Bolts, where L = 8 cm, are used to connect panels together.

## Accessories

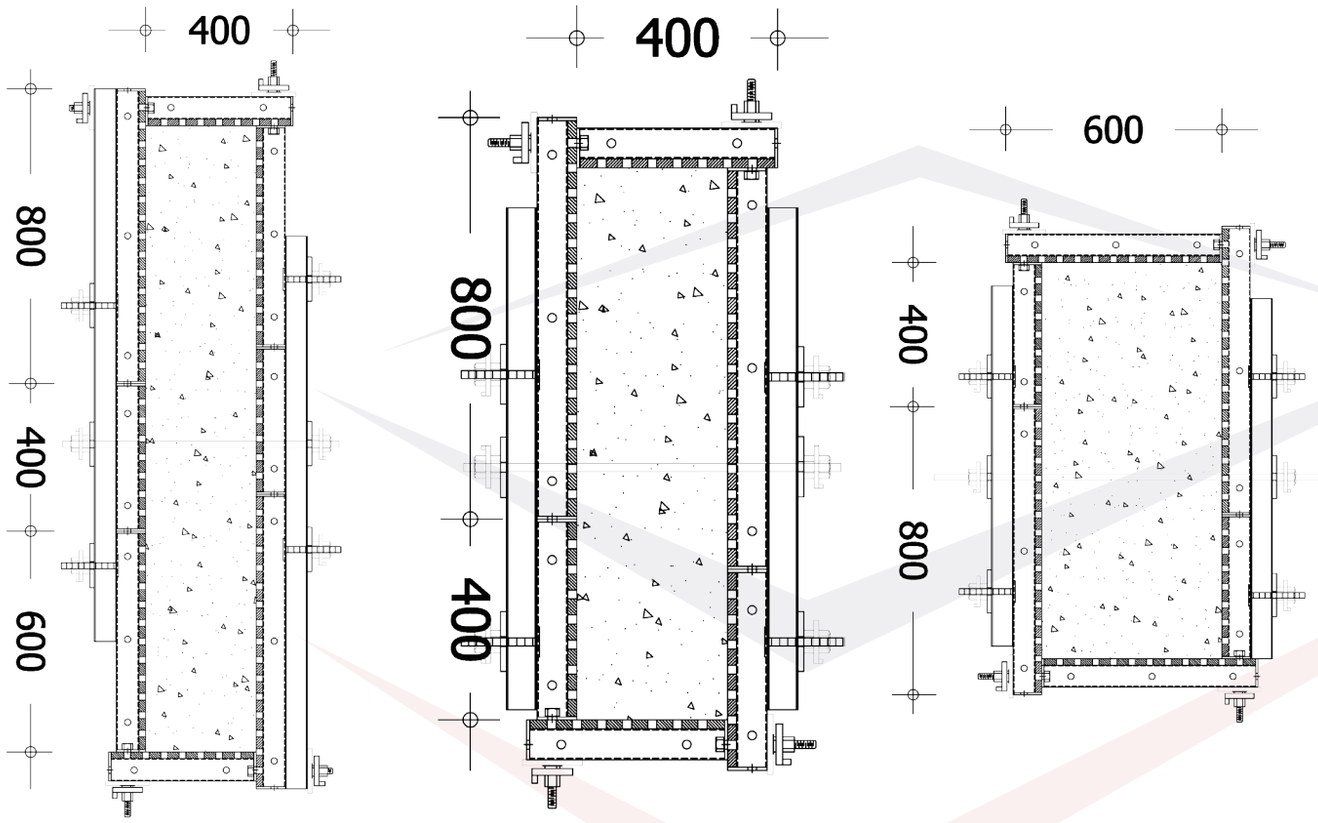


- 1.V.M.C system ensures the columns easy shifting from one location to another resulting in time and effort savings.
  2.It also provides work flexibility for different column sizes and dimensions.
  3.Different horizontal and vertical dimensions can be produced upon the request of the client.
  4.Vertical dimensions are available up to 6 m and it works by placing vertical boards and related chips in order to maintain the concrete pouring level.



- V.M.C shore connector is used to connect between the panels and the tilt-up shore using Rivet Pin 17 mm and Spring Clip large.

## Extension Units



- vmc system is characterized by providing all of the dimensions of the client, as illustrated with drawings

- This picture shows how the maximum column height is adjusted through the shore connector using Acrow Bolts (L = 18 cm)
